## GCE AS/A level

WJEC
0976/01

# MATHEMATICS - C4 <br> Pure Mathematics 

A.M. MONDAY, 16 June 2014

1 hour 30 minutes

## ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet;
- a calculator.

## INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen.
Answer all questions.
Sufficient working must be shown to demonstrate the mathematical method employed.

## INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.
You are reminded of the necessity for good English and orderly presentation in your answers.

1. The curve $C$ is defined by

$$
3 x^{3}-5 x y^{2}+2 y^{4}=15
$$

The point $P$ has coordinates $(1,2)$ and lies on $C$.
Find the equation of the normal to $C$ at $P$.
2. (a) Express $\frac{5 x^{2}+7 x+17}{(x+1)^{2}(x-4)}$ in terms of partial fractions.
(b) Use your answer to part (a) to express $\frac{5 x^{2}+9 x+9}{(x+1)^{2}(x-4)}$ in terms of partial fractions.
3. (a) Find all values of $x$ in the range $0^{\circ} \leqslant x \leqslant 180^{\circ}$ satisfying

$$
\begin{equation*}
\tan 2 x=3 \cot x \tag{4}
\end{equation*}
$$

(b) (i) Express $21 \sin \theta-20 \cos \theta$ in the form $R \sin (\theta-\alpha)$, where $R$ and $\alpha$ are constants with $R>0$ and $0^{\circ}<\alpha<90^{\circ}$.
(ii) Use your results to part (i) to find the greatest value of

$$
\frac{1}{21 \sin \theta-20 \cos \theta+31} .
$$

Write down a value for $\theta$ for which this greatest value occurs.
4. The region $R$ is bounded by the curve $y=3+2 \sin x$, the $x$-axis and the lines $x=0, x=\frac{\pi}{4}$. Find the volume of the solid generated when $R$ is rotated through four right angles about the $x$-axis. Give your answer correct to the nearest integer.
5. Expand

$$
6 \sqrt{1-2 x}-\frac{1}{1+4 x}
$$

in ascending powers of $x$ up to and including the term in $x^{2}$. State the range of values of $x$ for which your expansion is valid.
6. The curve $C$ has the parametric equations $x=2 t, y=5 t^{3}$. The point $P$ lies on $C$ and has parameter $p$.
(a) Show that the equation of the tangent to $C$ at the point $P$ is

$$
\begin{equation*}
2 y=15 p^{2} x-20 p^{3} \tag{4}
\end{equation*}
$$

(b) The tangent to $C$ at the point $P$ intersects $C$ again at the point $Q\left(2 q, 5 q^{3}\right)$. Given that $p=1$, show that $q$ satisfies the equation

$$
q^{3}-3 q+2=0
$$

Hence find the value of $q$.
7. (a) Find $\int x^{4} \ln 2 x \mathrm{~d} x$.
(b) Use the substitution $u=10 \cos x-1$ to evaluate

$$
\begin{equation*}
\int_{0}^{\frac{\pi}{3}} \sqrt{(10 \cos x-1)} \sin x \mathrm{~d} x \tag{4}
\end{equation*}
$$

8. The value $£ V$ of a long term investment may be modelled as a continuous variable. At time $t$ years, the rate of increase of $V$ is directly proportional to the value of $V$.
(a) Write down a differential equation satisfied by $V$.
(b) Show that $V=A \mathrm{e}^{k t}$, where $A$ and $k$ are constants.
(c) The value of the investment after 2 years is $£ 292$ and its value after 28 years is $£ 637$.
(i) Show that $k=0.03$, correct to two decimal places.
(ii) Find the value of $A$ correct to the nearest integer.
(iii) Find the initial value of the investment. Give your answer correct to the nearest pound.

## TURN OVER

9. (a) The vectors $\mathbf{p}$ and $\mathbf{q}$ are given by

$$
\begin{aligned}
& \mathbf{p}=2 \mathbf{i}-\mathbf{i}+3 \mathbf{k} \\
& \mathbf{q}=5 \mathbf{i}+4 \mathbf{j}-8 \mathbf{k} .
\end{aligned}
$$

Find the angle between $\mathbf{p}$ and $\mathbf{q}$.
(b) In the diagram below, the points $O, A, B, C$ and $D$ are such that $A$ is the mid-point of $O D$ and $C$ is the mid-point of $O B$.

Taking $O$ as the origin, the position vectors of $A$ and $B$ are denoted by $\mathbf{a}$ and $\mathbf{b}$ respectively.
(i) Show that $\mathbf{C D}=2 \mathbf{a}-\frac{1}{2} \mathbf{b}$.

Hence show that the vector equation of the line $C D$ may be expressed in the form

$$
\mathbf{r}=2 \lambda \mathbf{a}+\frac{1}{2}(1-\lambda) \mathbf{b} .
$$

The vector equation of the line $L$ may be expressed in the form

$$
\mathbf{r}=\frac{1}{3} \mu \mathbf{a}+\frac{1}{3}(\mu-1) \mathbf{b} .
$$

The lines $C D$ and $L$ intersect at the point $E$.
(ii) By giving $\lambda$ and $\mu$ appropriate values, or otherwise, show that $E$ has position vector $\frac{2}{3} \mathbf{a}+\frac{1}{3} \mathbf{b}$.
(iii) Give a geometrical interpretation of the fact that $E$ has position vector $\frac{2}{3} \mathbf{a}+\frac{1}{3} \mathbf{b}$.
10. Complete the following proof by contradiction to show that

$$
\sin \theta+\cos \theta \leqslant \sqrt{2}
$$

for all values of $\theta$.
Assume that there is a value of $\theta$ for which $\sin \theta+\cos \theta>\sqrt{2}$.
Then squaring both sides, we have:
