## GCE AS/A level

0977/01

# MATHEMATICS - FP1 <br> Further Pure Mathematics 

P.M. TUESDAY, 16 June 2015

1 hour 30 minutes

## ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

- a 12 page answer book;
- a Formula Booklet;
- a calculator.

## INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen.
Answer all questions.
Sufficient working must be shown to demonstrate the mathematical method employed.

## INFORMATION FOR CANDIDATES

The number of marks is given in brackets at the end of each question or part-question.
You are reminded of the necessity for good English and orderly presentation in your answers.

1. Differentiate $\frac{1}{x^{2}-x}$ from first principles.
2. The transformation $T$ in the plane consists of a reflection in the line $y=x$ followed by a reflection in the line $y=-x$.
(a) Determine the $2 \times 2$ matrix which represents $T$.
(b) Identify the single transformation that is equivalent to $T$.
3. (a) The complex number $z$ satisfies the equation

$$
2 z-\mathrm{i} \bar{z}=\frac{2+\mathrm{i}}{1-\mathrm{i}}
$$

where $\bar{z}$ denotes the complex conjugate of $z$. Express $z$ in the form $x+\mathrm{i} y$.
(b) Find the modulus and the argument of the complex number $-20-21$ i.
4. (a) The matrix $\mathbf{M}$ is given by

$$
\mathbf{M}=\left[\begin{array}{lll}
1 & 2 & 1 \\
2 & 5 & 1 \\
1 & 1 & 2
\end{array}\right]
$$

Show that $\mathbf{M}$ is singular.
(b) (i) Find the value of $\mu$ for which the following system of equations is consistent.

$$
\left[\begin{array}{lll}
1 & 2 & 1 \\
2 & 5 & 1 \\
1 & 1 & 2
\end{array}\right]\left[\begin{array}{l}
x \\
y \\
z
\end{array}\right]=\left[\begin{array}{l}
2 \\
2 \\
\mu
\end{array}\right]
$$

(ii) For this value of $\mu$, find the general solution to this system of equations.
5. The roots of the cubic equation

$$
x^{3}-4 x^{2}-8 x+k=0
$$

are in geometric progression. Determine the value of $k$.
6. The matrices $\mathbf{A}$ and $\mathbf{B}$ are given by

$$
\mathbf{A}=\left[\begin{array}{lll}
3 & 2 & 4 \\
3 & 3 & 6 \\
2 & 2 & 3
\end{array}\right] ; \mathbf{B}=\left[\begin{array}{rrr}
3 & -2 & 0 \\
-3 & -1 & 6 \\
0 & 2 & -3
\end{array}\right] .
$$

(a) Evaluate the matrix $\mathbf{A B}$.
(b) Hence, or otherwise, find the inverse matrix $\mathbf{A}^{-1}$.
(c) Hence solve the simultaneous equations

$$
\begin{aligned}
& 3 x+2 y+4 z=14 \\
& 3 x+3 y+6 z=18 \\
& 2 x+2 y+3 z=11
\end{aligned}
$$

7. (a) Express

$$
\frac{2}{n(n+2)}
$$

in partial fractions.
(b) Given that

$$
S_{n}=\sum_{r=1}^{n} \frac{2}{r(r+2)},
$$

obtain an expression for $S_{n}$ in the form

$$
\frac{a n^{2}+b n}{2(n+1)(n+2)},
$$

where $a$ and $b$ are positive integers whose values are to be determined.
8. The matrix $\mathbf{A}$ is given by

$$
\mathbf{A}=\left[\begin{array}{ll}
1 & 0 \\
2 & 1
\end{array}\right]
$$

(a) Show that

$$
\mathbf{A}^{2}=2 \mathbf{A}-\mathbf{I},
$$

where $\mathbf{I}$ denotes the $2 \times 2$ identity matrix.
(b) Using mathematical induction, prove that

$$
\mathbf{A}^{n}=n \mathbf{A}-(n-1) \mathbf{I}
$$

for all positive integers $n$.
9. The function $f$ is defined on the domain $(0, \pi)$ by

$$
f(x)=2^{x} \sin x
$$

(a) Obtain an expression for $f^{\prime}(x)$.
(b) Determine the $x$-coordinate of the stationary point on the graph of $f$, giving your answer correct to 2 decimal places.
10. The complex number $z$ is represented by the point $P(x, y)$ in the Argand diagram and

$$
|z+3|=k|z-\mathrm{i}|,
$$

where $k$ is a real positive constant.
(a) When $k \neq 1$, the locus of $P$ is a circle. Find, in terms of $k$,
(i) the equation of the circle,
(ii) the coordinates of the centre of the circle.
(b) (i) Write down the equation of the locus of $P$ when $k=1$.
(ii) Give a geometric interpretation of this locus.
