## **Final**

Mark Scheme

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: aga.org.uk

## Copyright

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

## **Key to mark scheme abbreviations**

M	mark is for method
m or dM	mark is dependent on one or more M marks and is for method
A	mark is dependent on M or m marks and is for accuracy
В	mark is independent of M or m marks and is for method and accuracy
E	mark is for explanation
√or ft or F	follow through from previous incorrect result
CAO	correct answer only
CSO	correct solution only
AWFW	anything which falls within
AWRT	anything which rounds to
ACF	any correct form
AG	answer given
SC	special case
OE	or equivalent
A2,1	2 or 1 (or 0) accuracy marks
−x EE	deduct x marks for each error
NMS	no method shown
PI	possibly implied
SCA	substantially correct approach
c	candidate
sf	significant figure(s)
dp	decimal place(s)

## No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

Otherwise we require evidence of a correct method for any marks to be awarded.

Q	Solution	Marks	Total	Comments
5(a)	3g - T = 3a	M1A1		M1: Three term equation of motion with
	T - g = a	M1A1		3g or 29.4, T and 3a.
	2g = 4a			A1: Correct equation.
				M1: Three term equation of motion with <i>g</i> or 9.8, <i>T</i> and <i>a</i> .
	$a = \frac{g}{2} = 4.9 \text{ m s}^{-2}$	A1	5	A1: Correct equation.
	2	AI	3	A1. Correct equation.
				A1: Correct final answer. Accept $\frac{g}{2}$
				2
				Note: Do not penalise candidates who
				consistently use signs in the opposite
				direction throughout, provided they then
				give their final answer as 4.9, having seen
				-4.9 in their working. If the final answer
				is
				–4.9 don't award the final A1 mark.
				Special Case:
				Whole string method $2g = 4a$ and
				2g 40 OF MIA1A1
				$a = \frac{2g}{4} = 4.9 \text{ OE scores M1A1A1}$
(b)	2 2 2 2 3			M1: Use of a constant acceleration
(b)	$v^2 = 0^2 + 2 \times 4.9 \times 0.4$ $v = \sqrt{3.92} = 1.98 \text{ m s}^{-1}$	M1		equation to find $v$ , with $u = 0$ , their value
	$v = \sqrt{3.92} = 1.98 \text{ m s}^{-1}$	A1F	2	for a from part (a) and $s = 0.4$ or 40.
				A1F: Correct speed. Follow through their
				acceleration from part (a). Use
				$v = \sqrt{0.8a}$ for FT.
				Accept 1.97.
				If candidates use two equations, award no
				marks until they have an equation for $v$ . (Note use of $t = 0.404$ or better required
				for A1)
(c)	$0^2 = \left(\sqrt{3.92}\right)^2 + 2 \times (-9.8)s$	M1		M1: Use of a constant acceleration
	,			equation with $v = 0$ , $a = \pm 9.8$ and their speed from (b).
	$s = \frac{3.92}{2 \times 9.8} = 0.2 \text{ m}$	A1		A1: Correct distance.
	Total = $0.2 + 0.4 = 0.6 \text{ m}$	A1	3	A1: Correct total distance. Allow 60 cm
	10tal = 0.2 + 0.4 = 0.0 iii	Ai	3	from correct working. Note
				$0^2 = \left(\sqrt{392}\right)^2 + 2 \times (-9.8)s$
				, , ,
				$s = \frac{392}{2 \times 9.8} = 20$
				scores M1A0A0
				If andidates was two squations around a
				If candidates use two equations, award no marks until they have an equation for <i>s</i> .
				(Note use of $t = 0.202$ or better required
				for A marks)

5(d)	The acceleration would be less, because the <u>resultant force</u> on each particle would be <u>reduced</u> .	B1 B1	2	B1: Less 'Slower acceleration' not acceptable B1: Appropriate reason.
				Only award second B1 if they say acceleration is less.
	Total		12	
6(a)	$8 = \frac{1}{2} \times 9.8t^2$ $t = \sqrt{\frac{16}{9.8}} = 1.28 \text{ s}$	M1A1		M1: Equation based on the vertical motion, with $u = 0$ , $s = \pm 8$ and $a = \pm 9.8$ . A1: Correct equation.
(b)	$t = \sqrt{\frac{16}{9.8}} = 1.28 \text{ s}$ $V \times \sqrt{\frac{16}{9.8}} = 20$	A1 M1A1	3	A1: Correct time. Allow 1.27 or AWRT 1.28. M1: Using 20 = speed × time. A1: Correct equation.
	$V = 20\sqrt{\frac{9.8}{16}} = 15.7 \text{ m s}^{-1}$	A1	3	A1: Correct speed. Accept 15.6 or $7\sqrt{5}$ or AWRT 15.6 or AWRT 15.7.
(c)	$V = 20\sqrt{\frac{9.8}{16}} = 15.7 \text{ m s}^{-1}$ $v_y = 9.8 \times \sqrt{\frac{16}{9.8}} (= 12.52)$ $v = \sqrt{15.65^2 + 12.52^2} = 20.0 \text{ m s}^{-1}$	M1A1	4	M1: Finding vertical component of velocity, with $u = 0$ , $a = \pm 9.8$ and their time from part (a). A1: Correct expression for velocity.
		A1	4	dM1: Finding the magnitude (with addition). A1: Correct speed. Accept 20 or 20.1 or AWRT 20.0.

7(a)(i)	F or $\mu R$ or $0.4R$ $mg$ or $W$ or $30g$ or $294$	B1 B1	2	B2: Correct diagram with exactly four forces showing arrow heads and labelled. B1: Diagram with one error or omission. B0: Diagram with 2 or more errors or omissions.  If components are also shown and they use a different style, eg dashed lines, they can be ignored.  If both components are shown in the same style as other forces, this counts as two errors.
(ii)	$R + 150\sin 20^{\circ} = 30 \times 9.8$ $(R = )30 \times 9.8 - 150\sin 20^{\circ}$ $= 242.69$	M1A1		Note; Do not accept 30kg for the weight.  M1: Resolving vertically to obtain a three term equation, with <i>R</i> , 150 sin or cos(20° or 70°) and 30 <i>g</i> oe.
	= 242.09 = 243 N (to 3sf)	A1	3	A1: Correct equation. Allow <i>g</i> instead of 9.8. A1: <b>AG</b> Correct final answer having seen either 2 <sup>nd</sup> or 3 <sup>rd</sup> or both line of solution.
(iii)	$(F =)0.4 \times 242.7 = 97.1 \text{ N}$	M1A1	2	M1: Use of $F = \mu R$ or $F \le \mu R$ A1: Correct final answer without an inequality. Accept 97.2.
(iv)	$30a = 150\cos 20^{\circ} - 97.08$ $a = \frac{150\cos 20^{\circ} - 97.08}{30} = 1.46 \text{ m s}^{-2}$	M1A1 dM1 A1	4	M1: Three term equation of motion with 30a, 150 sin or cos(20 or 70°) and their friction from (a)(iii). Condone incorrect signs. A1: Correct equation. dM1: Solving for a. A1: Correct acceleration. Accept 1.45 or 1.47 or AWRT 1.46
(b)	$R = 30 \times 9.8 - T \sin 20^{\circ}$ $F = 0.4(30 \times 9.8 - T \sin 20^{\circ})$ $T \cos 20^{\circ} = 0.4(30 \times 9.8 - T \sin 20^{\circ})$	B1 B1 M1A1		B1: Correct normal reaction in terms of <i>T</i> . B1: Correct friction in terms of <i>T</i> M1: Resolving tension horizontally and equating to <i>F</i> , provided that <i>F</i> is in terms
	$T = \frac{0.4 \times 30 \times 9.8}{\cos 20^{\circ} + 0.4 \sin 20^{\circ}} = 109 \text{ N}$	A1	5	of <i>T</i> . A1: Correct equation. A1: Correct tension. AWRT 109.
(c)	The same	B1	1	B1: The same.
	~		1=	Use of $g = 9.81$ gives acceptable final answers.

8(a)	$\mathbf{r} = (-17.5\mathbf{i} - 27\mathbf{j})t + \frac{1}{2}(0.5\mathbf{i} + 0.6\mathbf{j})t^2 +$	M1A1	3	M1: Use of $\mathbf{u}t + \frac{1}{2}\mathbf{a}t^2$
	(500 <b>i</b> + 200 <b>j</b> )	A1		A1: Correct with or without the initial
	OR			position. That is with the final term missing or on the wrong side.
	$\mathbf{r} = (500 - 17.5t + 0.25t^2)\mathbf{i} +$			A1: Correct with the initial position
	$(200 - 27t + 0.3t^2)$ <b>j</b>			included.
<b>(b)</b>	$200 = -17.5t + 0.25t^2 + 500$	M1A1		M1: Forming equation for one component based on position of the rock and their
	$0.25t^2 - 17.5t + 300 = 0$			position vector.
	t = 40 or 30	A1		A1: Correct quadratic equation. A1: At least one correct solution3.
				A1: At least one correct solutions.
	$-400 = -27t + 0.3t^2 + 200$	dM1		dM1: Forming equation for the other
	$0.3t^2 - 27t + 600 = 0$	A1		component. A1: Correct equation.
	t = 40 or 50	dM1		dM1: Obtaining one or two positive
	$\therefore t = 40$	A1	7	solutions. A1: Selecting 40.
	OR			
				dM1: Substituting 40 into the other component.
	$-27 \times 40 + 0.3 \times 40^2 + 200 = -1080 + 480 + 200$	(dM1)		A1: Correct substitution
	= -400	(A1) (dM1)		dM1: Checking this component of the position vector
	$\therefore t = 40$	(A1)		A1: Concluding that $t = 40$
				Note that alternative methods based on trial and improvement can be awarded full marks.
	Alternative methods $0.25t^2 - 17.5t + 300 = 0$ $0.3t^2 - 27t + 600 = 0$	(M1 A1) (dM1 A1)		Marks allocated as above
	0.55.2 44.5000 0			
	$0.55t^2 - 44.5t + 900 = 0$ $t = 40 \text{ or } t = 40.9$			A1: At least one correct solution
	$t = 40 \text{ or } t = 40.9$ $0.25 \times 40^2 - 17.5 \times 40 + 300 = 0$	(A1) (dM1)		dM1: Checking one or both solutions A1: concluding $t = 40$
	$0.25 \times 40^{2} - 17.3 \times 40 + 300 = 0$ $0.3 \times 40^{2} - 27 \times 40 + 600 = 0$	(01111)		111. Concluding t = 40
	$0.3 \times 40^{\circ} - 27 \times 40 + 600 = 0$ $\therefore t = 40$	(A1)		
	1 — 40	(A1)		
	$0.05t^2 - 9.5t + 300 = 0$			A1: At least one correct solution
	t = 40  or  t = 150	(A1)		dM1: Checking one or both solutions
	$0.25 \times 40^2 - 17.5 \times 40 + 300 = 0$	(dM1)		A1: concluding $t = 40$
	$0.3 \times 40^2 - 27 \times 40 + 600 = 0$			
	$\therefore t = 40$	(A1)		

Q	Solution	Marks	Total	Comments
8(c)	Av. Velocity = $\frac{(200\mathbf{i} - 400\mathbf{j}) - (500\mathbf{i} + 200\mathbf{j})}{40}$ $= \frac{-300\mathbf{i} - 600\mathbf{j}}{40}$	M1 A1F		M1: Use of change in position over time, with a subtraction to obtain position. Do not award if one position is taken as the origin.
	$= -7.5\mathbf{i} - 15\mathbf{j}$	A1F	3	A1F: Correct expression. A1F: Correct final answer.
(d)	No – The helicopter will follow a curved path and not move along a straight line between the two positions.	B2,1	2	Follow through on their time from part (b).  Av Vel = $\frac{-300\mathbf{i} - 600\mathbf{j}}{t}$ B1: No. B1: Mentions path is longer than the distance between the two points.  Only award second B1 if the candidate has stated that the two quantities are not equal.
