

# **GCE MARKING SCHEME**

**PHYSICS  
AS/Advanced**

**SUMMER 2014**

## INTRODUCTION

The marking schemes which follow were those used by WJEC for the Summer 2014 examination in GCE PHYSICS. They were finalised after detailed discussion at examiners' conferences by all the examiners involved in the assessment. The conferences were held shortly after the papers were taken so that reference could be made to the full range of candidates' responses, with photocopied scripts forming the basis of discussion. The aim of the conferences was to ensure that the marking schemes were interpreted and applied in the same way by all examiners.

It is hoped that this information will be of assistance to centres but it is recognised at the same time that, without the benefit of participation in the examiners' conferences, teachers may have different views on certain matters of detail or interpretation.

WJEC regrets that it cannot enter into any discussion or correspondence about these marking schemes.

## PH1

Question			Marking details	Marks Available
1	(a)	(i)	<u>Energy cannot be created or destroyed; it can only change from one form to another.</u> Don't accept can only be conserved.	[1]
		(ii)	$E_p \rightarrow E_k$ (1) can be implied Some energy lost as heat <b>or</b> due to air resistance <b>or</b> due to friction with air - general statement (1) Air molecules gain $E_k$ and/or molecules of object gain $E_k$ - <b>specific</b> statement (1)	[3]
	(b)	(i)	$mgh$ calculated correctly = 376.7 [J] (1) accept $g$ as 9.8 or 9.81 but not 10 $\frac{1}{2}mv^2$ calculated correctly = 288 [J] (1) $E_p - E_k = 88.7$ [J] [ <b>ecf</b> from calculated values of $E_p$ and/or $E_k$ ] (1)	[3]
		(ii)	<u>Correct substitution</u> into $W = Fd$ i.e. $88.7$ ( <b>ecf</b> ) = $F \times 4.0$ (1) $F = 22[.2\text{N}]$ (1) If either $E_p$ or $E_k$ substituted in for $W$ then award 1 mark only <b>Alternative Solution:</b> Force down slope = $16 \times 9.81 \times \frac{2.4}{4}$ [ $F = mgsin\theta$ ] = 94.2 [N] Resultant Force $\Sigma F = 16 \times \left(\frac{6^2}{8}\right) = 72$ [N] Mean Frictional Force = $94.2 - 72 = 22[.2\text{N}]$ Award 1 mark for <b>either</b> force values correct (or both) Award 2 marks for correct solution  <b>Question 1 total</b>	[2]
2	(a)	(i)	Force $\propto$ extension [provided elastic limit is not exceeded] Accept $F \propto x$ but $x$ must be defined	[1]
		(ii)	4.0 [cm]	[1]
	(b)	(i)	$F$ (from graph) = 0.6 [N] (1) Correct application of $a = \frac{\Sigma F}{m}$ i.e. $\frac{0.6}{0.4} = 1.5 \text{ ms}^{-2}$ (1) <b>UNIT mark</b> ( <b>ecf</b> on $F$ )	[2]
		(ii)	$E_{\text{spring}} = 0$ [J] (1) $\Sigma F = 0$ <b>or</b> acceleration = 0 <u>so extension = 0</u> (1)	[2]
	(c)	(i)	substitution into $\frac{1}{2}Fx$ ( <b>or</b> area under graph <b>or</b> $\frac{1}{2}kx^2$ ) (1) <b>ecf</b> on $F$ $E_{\text{spring}} = 3.6 \times 10^{-2}$ [J] (1)	[2]
		(ii)	$E_{\text{spring}} = 0$ [J] (1) $\Sigma F = 0$ <b>or</b> acceleration = 0 <u>so extension = 0</u> (1)	[2]
	(d)	New extension = $\frac{1}{2} \times$ original (1) Force in each spring = $\frac{1}{2} \times$ original <b>or</b> spring constant of system = $2 \times$ original <b>or</b> energy in each spring = $\frac{1}{4} \times$ original (1) Total energy (in both springs) = $\frac{1}{2} \times$ original (1) Accept algebraic equivalents  <b>Question 2 total</b>	[3]	
				[11]

Question			Marking details	Marks Available
3	(a)	(i)	$\text{J s}^{-1}$	[3×1]
		(ii)	$\text{V A}^{-1}$	
		(iii)	$\text{A s}$	
	(b)	(i)	$t = 2 \times 3\,600$ or $7\,200 \text{ s}$ (1) $Q = 0.15 \times 7\,200 = 1\,080 \text{ [C]}$ (1)	[2]
		(ii)	$\frac{6480}{1080} = 6 \text{ [V]}$ (ecf on $Q$ )	[1]
		(iii)	$\frac{5832}{1080} = 5.4 \text{ [V]}$ (ecf on $Q$ )	[1]
		(iv)	$6 - 5.4 = 0.6 \text{ [V]}$ (1) (ecf from (b)(ii) & (iii)) $\frac{0.6}{0.15} = 4 \text{ [\Omega]}$ (1) (ecf on $0.6 \text{ [V]}$ )	
			<b>Or</b> Correct substitution into $V = E - Ir$ (i.e. $5.4 = 6.0 - 0.15r$ ) (1) $r = 4 \text{ [\Omega]}$ (1) (ecf from (b)(ii) & (iii))	[2]
			<b>Alternative Solution:</b> $\frac{(6480 - 5832)}{7200} = 0.09 \text{ J s}^{-1}$ (Lost energy in cell per second) (1) $I^2 r = 0.09$ and $r = 4 \text{ [\Omega]}$ (1)	
			<b>Question 3 Total</b>	[9]

Question		Marking details	Marks Available
4	(a)	<p><u>Electrical energy (or work done) transferred [to other forms passing] between two points (1) per coulomb of charge (1)</u>            Definition of 1 V award 1 mark only</p>	[2]
	(b)	(i) $V_{\text{supply}} = V_1 + V_2 + V_3$	[1]
		(ii) Energy	[1]
	(c)	(i) $R_1 + 12 = \frac{9}{0.5}$ (1) Clear manipulation seen to show $R_1 = 6[\Omega]$ (1)	[2]
		(ii) (I) $\frac{1}{R} = \frac{1}{R_1} + \frac{1}{R_2}$ to show effective parallel combination = $6\Omega$ (1) this can be implied V across upper $6\Omega$ resistor shown = $4.5[\text{V}]$ (ecf on parallel combination) (1)	[2]
		(II) Total resistance = $12\Omega$ (1) $I = \frac{9.0}{12} = 0.75[\text{A}]$ (1) (accept $\frac{4.5}{6} = 0.75[\text{A}]$ )	[2]
		(III) $1.2 = \frac{9}{(6 + R_{\text{parallel}})}$ (1) $R_{\text{parallel}} = 1.5[\Omega]$ (1) $n \times \left(\frac{1}{12}\right) = \frac{1}{1.5}$ (1) ecf on $1.5[\Omega]$ $n = 8$ (1) Full marks for correct answer based on trial and error <b>Alternative solution:</b> $\frac{9}{1.2} = 7.5[\Omega]$ (1) $7.5 - 6 = 1.5[\Omega]$ (1) $\frac{12}{n} = 1.5[\Omega]$ (1) $n = 8$ (1)	[4]
		<b>Question 4 Total</b>	<b>[14]</b>

Question			Marking details	Marks Available
5	(a)	(i)	Ruler and wire shown and labelled (1) Moving pointer <b>or</b> jockey <b>or</b> crocodile clip indicated (1) <b>Either:</b> Correctly positioned ohmmeter with no power supply; <b>or</b> correctly positioned voltmeter and ammeter with power supply (1) [No labelling required for either method].	[3]
		(ii)	Diagonal line through origin	[1]
		(iii)	CSA from <u>diameter of wire</u> (1) Gradient from graph = $(R/l)$ <b>or</b> $(\rho/A)$ <b>Or</b> stated take a pair of $R$ and $l$ values from the graph (1) $\rho = \text{gradient} \times \text{CSA}$ <b>or</b> use of $\rho = RA/l$ (1)	[3]
	(b)	(i)	$R = \frac{144}{32} = 4.5 [\Omega]$ (1) Correct substitution into $R = \rho l/A$ (1) $l = 0.375 [\text{m}]$ (1) ( <b>ecf</b> on $R$ )	[3]
		(ii)	$I = 2.7 [\text{A}]$ (from $V/R$ <b>or</b> $P/V$ etc) (1) ( <b>ecf</b> on $I$ ) Correct substitution into $I = nAve$ (1) $v = 1.24 \times 10^{-2} [\text{m s}^{-1}]$ (1) accept $0.01 \text{ m s}^{-1}$	[3]
			<b>Question 5 Total</b>	<b>[13]</b>

Question			Marking details	Marks Available	
6	(a)	(i)	Acceleration defined as rate of change of <u>velocity</u> [or equivalent] <b>or</b> $a = \frac{(v-u)}{t} \quad (1)$ <u>Clear manipulation</u> to show that $v=u+at$ (1)	[2]	
		(ii)	$v=u+at$ substituted into $x = (u+v)t/2$ (1) <u>Clear manipulation</u> shown (1)	[2]	
	(b)	(i)	A (1) Horizontal velocity (= $65 \text{ m s}^{-1}$ ) constant <b>or</b> same speed as plane <b>or</b> sack lands directly underneath plane (1) Vertical velocity increases <b>or</b> there is a vertical acceleration (1)	[3]	
		(ii)	(I)	Substitution into $v^2=u^2+2ax$ <b>and</b> $u = 0$ shown (1) $x$ calculated = $45.9 \text{ [m]}$ (1)	[2]
			(II)	Correct substitution into $v = at$ <b>or</b> $x=1/2at^2$ <b>or</b> $x = \frac{(u+v)t}{2}$ (1) $t=3.1 \text{ [s]}$ (1)	[2]
		(iii)	$v_R^2 = (65^2 + 30^2)$ (correct substitution into Pythagoras) (1) $v_R = 71.6 \text{ [m s}^{-1}\text{]}$ (1) Valid angle calculated <u>and shown</u> <b>or</b> described e.g. $\theta = 24.8^\circ$ below horizontal (1)	[3]	
<b>Question 6 Total</b>			<b>[14]</b>		
7	(a)	Replace <i>mass</i> with <i>force</i> (1) Don't accept weight Introduce <u>perpendicular distance to pivot</u> (1)	[2]		
	(b)	$(2 \times 700) - 1\,200$ (1) Weight of beam = $200 \text{ [N]}$ (1) <b>Alternative solution:</b> Moment about A or B e.g. $(700 \times 5) = (1\,200 + W) \times 2.5$	[2]		
	(c)	(i)		[2]	
			Upward forces as shown and indicated (1) Downward forces as shown and indicated (1) N.B. $1\,200 \text{ [N]}$ force can be indicated anywhere between $W$ and $F_B$		
			(ii)	Taking moments about A: $F_B \times 5.0$ (1) $(1\,200 \times 3.5) + (200 \times 2.5)$ (1) ( <b>ecf</b> on 200) $F_B = 940 \text{ [N]}$ (1)	[3]
(iii)	$1\,400 - 940 = 460 \text{ [N]}$ ( <b>ecf</b> from (b) and/or (c)(ii)) Accept answer based on moments calculated about B.	[1]			
<b>Question 7 Total</b>			<b>[10]</b>		

**PH2**

Question			Marking details	Marks Available
1	(a)	(i)	Attempt at sinusoid, right way up, passing within 1 mm of all dots	1
		(ii)	P and Q are in phase (1) Amplitude of P > amplitude of Q (1)	2
(iii)		Q and R are in antiphase / exactly out of phase (1) Amplitude of Q = amplitude of R (1)	2	
(iv)		$\frac{\lambda}{2} = 0.20$ [m] <b>or</b> $\lambda = 0.40$ [m] <b>or</b> by implication (1) $v = 96 \text{ m s}^{-1}$ <b>UNIT ecf</b> (1)	2	
	(b)		$\frac{\lambda}{2} = 0.15$ [m] ( <b>or</b> $\lambda = 0.30$ [m]) <b>or</b> $v = 96$ [m s <sup>-1</sup> ] <b>ecf</b> from (a)(iv) <b>or</b> $f = \left(\frac{4}{3}\right) 240$ [Hz] <b>or</b> by implication (1) $f = 320$ [Hz] but not by cancellation of errors, <b>ecf</b> on $v$ from (a)(iv) (1)	2
<b>Question 1 total</b>				<b>[9]</b>
2	(a)	(i)	$S_2Q = \sqrt{(350^2 + 120^2)}$ [mm] <b>or</b> equivalent (1) Therefore $S_2Q - S_1Q = (370 - 350)$ [mm] (1)	2
		(ii)	For any dot, path difference = $n\lambda$ , <b>or</b> for P, path difference = 0 <b>or</b> any other remark relevant to the conclusion that ... (1) $\lambda = 10$ [mm] (1)	2
		(iii)	$\lambda = \left(\frac{120 \times 30}{350}\right)$ (1) $\lambda = 10$ mm <b>or</b> 10.3 mm <b>UNIT</b> (1)	2
	(b)	With sensor in front of source <b>either</b> rotate sensor [at least through 90°] <b>or</b> interpose array of metal rods /metal grille and rotate [at least through 90°] (1) Don't accept metal grid Signal strength changes (1) Accept in words or in diagram	2	
<b>Question 2 total</b>				<b>[8]</b>

Question		Marking details	Marks Available
3	(a)	[Flat, opaque] screen / sheet/ plate / material with slits / gaps (1) Slits are parallel / vertical <b>or</b> equally spaced <b>or</b> closely spaced <b>or</b> many / multiple (1)	2
	(b)	(i) $\frac{1}{400000} = [2.5 \times 10^{-6} \text{ m}]$	1
		(ii) $2\lambda = 2.5 \times 10^{-6} \sin 25.2^\circ$ even with the 2 missing or mishandled (1) Correct placing of the 2 (1) $\lambda = 532 \times 10^{-9} \text{ [m]}$ <b>ecf</b> on $d$ only (1)	3
		(iii) $3 \times 532 = 2500 \sin \theta$ or equivalent <b>ecf</b> on $\lambda$ (1) $\theta = 39.7^\circ$ or $40^\circ$ <b>ecf</b> on $\lambda$ (1)	2
		(iv) Young's slits much further apart than slits in grating Don't accept slits much narrower <b>or</b> gaps are much smaller	1
<b>Question 3 Total</b>		<b>[9]</b>	
4	(a)	(i) medium 1: $2.0 \times 10^8 \text{ [m s}^{-1}\text{]}$ <b>and</b> medium 2: $2.5 \times 10^8 \text{ [m s}^{-1}\text{]}$	1
		(ii) Correct use of $\sin 30^\circ$ seen clearly (1) Rest of argument, including use of $t = \frac{d}{v}$ [ <b>ecf</b> on $v$ and on value of $\sin 30^\circ$ , if failure to reach the stated time is noted]. (1)	2
		(iii) $BD = 2.5 \times 10^8 \text{ ecf} \times 2.5 \times 10^{-11} \text{ [m]}$ [= 6.25 mm] <b>or</b> by implication (1) $\theta_2 = 38.7^\circ$ (or $39^\circ$ ) <b>ecf</b> on $v = 2.5 \times 10^8 \text{ [m s}^{-1}\text{]}$ (1)	2
		(iv) $1.50 \sin 30^\circ = 1.20 \sin \theta_2$ (1) Therefore $\theta_2 = 38.7^\circ$ (or $39^\circ$ ) <b>no ecf</b> (1)	2
		(b)	(i) Use of $v = 2.0 \times 10^8 \text{ [m s}^{-1}\text{]}$ (1) $t = \frac{1600}{2.0 \times 10^8} \text{ [s]}$ <b>ecf</b> on $v$ (1)
	(ii) Critical angle = $76^\circ$ <b>or</b> by implication (1) $n_{\text{clad}} [\times \sin 90^\circ] = 1.500 \sin 76^\circ$ <b>ecf</b> on $76^\circ$ <b>or</b> by implication (1) $n_{\text{clad}} = 1.455$ <b>or</b> $1.46$ <b>do not accept</b> $1.45$ <b>no ecf</b> (1)	3	
	(iii) $\frac{AC}{AB} = \cos 14^\circ$ <b>or</b> equivalent <b>or</b> by implication (1) $\Delta t = 0.24 \mu\text{s}$ <b>ecf</b> on $v$ (1)	2	
	<b>Question 4 Total</b>		<b>[14]</b>

Question		Marking details	Marks Available	
5	(a)	[Minimum] energy needed to release [or eject] electron from magnesium [or metal or surface or solid not atom]	1	
	(b)	$E_{k \max} = 6.63 \times 10^{-34} \times 1.16 \times 10^{15} \text{ [J]} - 5.9 \times 10^{-19} \text{ [J]}$ (1) $E_{k \max} = 1.79 \times 10^{-19} \text{ [J]}$ (1)	2	
	(c)	<u>Photon</u> energy < work function (1) don't accept photon energy in symbols. Accept not enough energy to liberate an electron. Don't accept $E_{k \max}$ can't be negative. $E_{\text{phot}} = 5.4 \times 10^{-19} \text{ [J]}$ <b>accept</b> $f_{\text{thresh}} = 8.9 \times 10^{14} \text{ [Hz]}$ (1) If negative energy award 1 mark only	2	
	(d)	(i)	Planck constant. <b>Accept</b> Planck's constant or $h$ .	1
		(ii)	[-] work function. <b>Accept</b> [-] $\phi$ .	1
(iii)		$f_0$ or minimum frequency to eject electron or threshold frequency	1	
<b>Question 5 Total</b>			<b>[8]</b>	
6	(a)	(i)	<b>Any 2 × (1) from:</b> • Monochromatic or same frequency or same wavelength • Wavefronts continuous or light in phase across width of beam • <u>Photons</u> in phase	2
		(ii)	Use of $E = hf$ and $f = \frac{c}{\lambda}$ or $E = \frac{hc}{\lambda}$ (1) $1.87 \times 10^{-19} \text{ [J]}$ (1)	2
		(iii)	$1.3 \times 10^{20} \text{ [s}^{-1}\text{]}$ <b>ecf</b>	1
		(iv)	Downward arrow from U to L (1) $2.29 \times 10^{-19} \text{ J}$ (or $2.3 \times 10^{-19} \text{ J}$ ) (1) <b>ecf</b>	2
	(b)	[Passing] photon stimulates electron to drop <u>from U to L</u> (1) Emitting another photon (1)  <b>Any 2 × (1) from:</b> • Process may happen repeatedly (or equivalent) as photons traverse cavity • Population inversion [between U and L] needed for stimulated emission to predominate over absorption • Pumping to P and drop to U brings about inversion • Level L self-emptying so less pumping needed or population inversion easier to accomplish • In phase with or travelling in the same direction as or polarised in the same direction as or identical to passing photon • Stimulated photon must have an energy of $1.87 \times 10^{-19} \text{ J}$ or equivalent	4	
<b>Question 6 Total</b>			<b>[11]</b>	

Question		Marking details	Marks Available	
7	(a)	(i) $\lambda_{\text{peak}} = \frac{2.90 \times 10^{-3}}{9900} \text{ [m]}$ <b>or equivalent</b> (1) $\lambda_{\text{peak}} = 293 \times 10^{-9} \text{ [m]}$ (1)	2	
		(ii) Peak between 280 and 300 nm (1) Curve goes through origin [with zero gradient at origin] and is consistent with approaching zero at very long wavelengths (1)	2	
		(iii) Blue accept white <b>or</b> violet <b>or</b> purple	1	
	(b)	$A = \frac{L}{\sigma T^4}$ with A as subject, with symbols <b>or</b> data <b>or</b> $1.84 \times 10^{19} \text{ m}^2$ (1) Attempt to use $A = 4\pi r^2$ and $d = 2r$ <b>or</b> $A = \pi I^2$ (1) $d = 2.4 \times 10^9 \text{ m}$ <b>ecf</b> on slips of $2^n$ or $10^n$ if already penalised (1)	3	
	(c)	(i) Absorption <b>accept</b> excitation <b>Don't accept</b> pumping	1	
		(ii) Dark / black lines crossing <b>or</b> missing wavelengths [continuous] spectrum <b>or</b> coloured background	1	
		(iii) <b>B</b> almost absent <b>and</b> any reference to populations of levels (1) First excited state not populated [so no transitions start here] <b>or</b> all electrons in ground state (1)	2	
	<b>Question 7 Total</b>			<b>[12]</b>
	8	(a)	(i) $uud + u\bar{u}d \rightarrow uud + u\bar{d}d$ (1) $+ u\bar{d}$ (1)	2
			(ii) $1 + 1 > 1 + 1 + 0$ (all numbers must be shown) <b>or</b> equivalent	1
(iii) Strong because no [photons (gammas) or] neutrinos <b>or</b> no flavour changes			1	
(iv) Charge <b>or</b> momentum <b>or</b> energy <b>or</b> strangeness Accept up quark number <b>or</b> down quark number			1	
(b)		(i) $0 + 0 > 0 + (-1) + 1$ (all numbers must be shown)	1	
		(ii) Weak interaction <b>accept</b> fusion (1) Takes place in the Sun [accept stars] (1) Part of the process whereby we get sunlight <b>or</b> energy <b>or</b> equivalent (1)	3	
<b>Question 8 Total</b>			<b>[9]</b>	

PH3

TEST 1 – Mark Scheme

SECTION A

A1.

- (a) Appropriate measurements taken to  $\pm 1$  mm. (1)  
Volume calculated correctly with correct unit. Ignore sig figs. (1) [2]
- (b) Using correct instrument resolution for uncertainty ( $\pm 1$  mm) Accept ( $\pm \frac{1}{2}$  mm). (1)  
All percentage uncertainties calculated correctly. **ecf** on resolution (1)  
Percentage uncertainties added to give final value. (1) No sig fig penalty. [3]  
(Allow **ecf** on incorrect % uncertainty; need to add 3 values)
- (c) (i) Absolute uncertainty calculated correctly. No sig fig or unit penalty. **ecf** [1]
- (ii) Value of the absolute uncertainty to 1 or 2 sig figs and  
volume to the same precision **and unit quoted**  
e.g.  $152 \pm 11 \text{ cm}^3$  or  $150000 \pm 10000 \text{ mm}^3$ . **ecf** [1]
- (d) Measuring instrument with a lower instrument resolution (accept reference to precision  
but not accuracy) OR use of calipers or micrometer [1]

Total [8]

A2.

- (a) Unit of extension in the table (accept mm or cm or m). (1)  
Extension measured consistently to the nearest mm. (1)  
Mean value of  $k$  calculated correctly. (1) No sig fig penalty. Answer must be seen in (a)  
Unit of  $k$  correct. (1) (Accept:  $\text{N m}^{-1}$  or  $\text{N mm}^{-1}$  or  $\text{kg s}^{-2}$  or  $\text{kg m s}^{-2} \text{ mm}^{-1}$ .) [4]
- (b) Absolute uncertainty calculated correctly. (1) No sig fig or unit penalty.  
Percentage uncertainty calculated correctly. **ecf** (1) No sig fig penalty. [2]  
**N.B.** If all values for  $k$  are the same then candidate needs to state that the  
uncertainty is 0 (1) and the % uncertainty is 0. (1)  
**Or** if candidate calculates % uncertainty in extension (1) % uncertainty in  $k =$  %  
uncertainty in extension. (1)
- (c) Correct rearrangement of equation  $m = \frac{kx}{g}$  or implied. (1)  
Value of  $m = 0.120$  kg. **Unit required.** (1) (Accept 0.11–0.13)  
Accept answer in grammes. [2]

Total [8]

**A3.**

- (a) Value of correct time or velocity repeated and mean taken. (1)  
Velocity calculated correctly including unit ( $\text{m s}^{-1}$ ). **ecf** (1) No sig fig penalty. [2]
- (b) (i) All units correct. (1)  
Columns for mean time and mean velocity correct. (1)  
Values for  $v^2$  correct. **ecf** (1)  
Consistent use of 2 dps in each column of data. (1) [4]
- (ii) Valid conclusion made with some reference to the data. (1)  
Ratio  $\frac{n}{v^2}$  or  $\frac{v^2}{n}$  calculated for all 3 rows. (1) [2]
- Total [8]

**SECTION B****B4**

- (a) (i) Circuit diagram drawn with correct symbols (ignore positions of voltmeter and ammeter for this mark). (1)  
Voltmeter and ammeter correctly positioned. (1) [2]
- (ii) Change length and measure  $V$  and  $I$ . (1)  
Reference to  $R = \frac{V}{I}$ . (1)  
Suitable intervals stated allow intervals up to a maximum of 0.2 m. (1) [3]  
**None of the above can be awarded from the table.**
- (b) Clear headings (length or  $l$  / current or  $I$  / voltage or pd or  $V$  / resistance or  $R$ ) and correct units on all columns. (1)  
Values of voltage; current; given in sequential values of length. (1)  
Resistance calculated correctly. (1)  
All  $I$  and  $V$  values given to 2 dp (1) [4]
- (c) Graph of resistance against length plotted with axes labelled and correct units given on both axes. (1) **ecf from table**  
Suitable scale chosen (don't allow multiples of 3) so that all data points occupy at least half the graph paper. (1)  
All points plotted correctly to within  $\pm \frac{1}{2}$  small square division. (1)  
1 good line of best fit consistent with the data. (1)  
2 good distinct lines of best fit drawn showing difference in gradient. (1) [5]
- (d) Distance correctly read from the graph. (allow  $\pm \frac{1}{2}$  small square division) (1)  
Unit and value given to the nearest cm or consistent with the scale used on the graph.  
Apply **ecf** if distance read incorrectly. (1) [2]

- (e) (i) Large triangle used (1) (should be close to the extremities of the line of best fit for wire starting at X) [or 2 equivalent suitable points clearly indicated on the graph].  
 Correct values used for gradient calculation. (1)  
 Gradient calculated correctly. **ecf**. No unit penalty. (1) If wire starting at Y do not award this mark. [3]
- (ii) Measuring the diameter of the wire starting at X. (1) No unit or sig fig penalty.  
 Accept in the range 0.28-0.33  
 Correct calculation of the cross-sectional area. (1) No unit or sig fig penalty.  
 Realising that gradient of the graph =  $\frac{\rho}{A}$  (can be applied anywhere in the answer) or using data values from the line of the graph. (1)  
 Calculating a value for resistivity in  $\Omega$  m. (1) **ecf** for gradient and area.  
 No unit or sig fig penalty. If data taken from the table and it is not on the graph line award 1 mark only.  
 Correct conclusion consistent with their resistivity value. (1) [5]  
 (Candidates need to calculate a value for resistivity before conclusion mark can be awarded.)

Total [24]

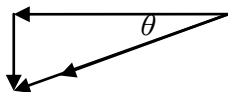

### TEST 2 – Mark Scheme as TEST 1

#### Except:

**A2(c)** 2<sup>nd</sup> mark: Value of  $m = 0.160$  kg. Unit required. (1) (Accept 0.15–0.17)

**A3 (b)(ii)** 2<sup>nd</sup> mark: Ratio  $\frac{n}{v^2}$  or  $\frac{v^2}{n}$  calculated for at least 3 rows of data or 2 sets of data. (1)

**PH4**

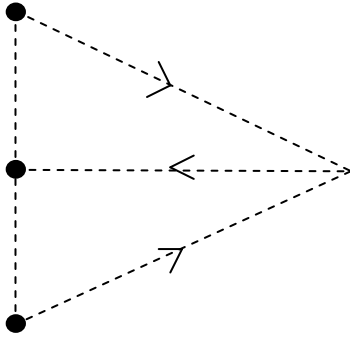

Question		Marking details	Marks Available
1	(a)	<p>Reasonable attempt at conservation of momentum (1) e.g. <math>330\,000m = \pm 10\,000m + 6.6 \times 10^{-27} \times v_1</math></p> <p>conservation of momentum applied correctly and values substituted (1) e.g. <math>330\,000 \times 3.4 \times 10^{-25} = -10\,000 \times 3.3 \times 10^{-25} + 6.6 \times 10^{-27} \times v_1</math></p> <p>correct answer = <math>1.75 \times 10^7 \text{ [m s}^{-1}\text{]}</math> (<b>no ecf</b>) (1)</p>	3
	(b)	<p>(i) Any valid answer e.g. impulse (<b>or</b> force <b>or</b> acceleration <b>or</b> change in momentum) is vertical, gamma has no momentum in horizontal direction, perpendicular directions are independent etc. Accept: no horizontal force</p> <p>(ii) Attempt at using <math>p = \frac{h}{\lambda}</math> (1)</p> <p><math>E = hf</math> <b>and</b> <math>c = f\lambda</math> quoted (<b>or</b> equivalent <math>E = \frac{hc}{\lambda}</math>) (1)</p> <p>N.B. <math>p = \frac{E}{c}</math> gains 2 marks</p> <p>Correct momentum = <math>6.33 \times 10^{-22}</math> (1)</p> <p>Answer = <math>= \frac{6.33 \times 10^{-22}}{3.3 \times 10^{-25}}</math> [<math>1\,920 \text{ m s}^{-1}</math>] (1)</p> <p>(iii) Method i.e. <math>\sqrt{10000^2 + 2000^2}</math> (1)</p> <p>Answer = <math>10\,200 \text{ [m s}^{-1}\text{]}</math> <b>ecf</b> on <math>v</math> from (b)(ii) (1)</p> <p>Method and correct <b>indication of angle</b> e.g. <math>\tan^{-1}\left(\frac{2000}{10000}\right)</math> (1)</p> <p>Answer = <math>11.5^\circ</math> <b>or</b> <math>0.2 \text{ [rad]}</math> (or <math>90-11.5</math> for other angle if indicated etc.) (1)</p> <div style="text-align: right;">  </div>	1
			<p>Correct momentum = <math>6.33 \times 10^{-22}</math> (1)</p> <p>Answer = <math>= \frac{6.33 \times 10^{-22}}{3.3 \times 10^{-25}}</math> [<math>1\,920 \text{ m s}^{-1}</math>] (1)</p> <p>(iii) Method i.e. <math>\sqrt{10000^2 + 2000^2}</math> (1)</p> <p>Answer = <math>10\,200 \text{ [m s}^{-1}\text{]}</math> <b>ecf</b> on <math>v</math> from (b)(ii) (1)</p> <p>Method and correct <b>indication of angle</b> e.g. <math>\tan^{-1}\left(\frac{2000}{10000}\right)</math> (1)</p> <p>Answer = <math>11.5^\circ</math> <b>or</b> <math>0.2 \text{ [rad]}</math> (or <math>90-11.5</math> for other angle if indicated etc.) (1)</p> <p><b>Question 1 Total</b></p>

<p>(b)</p>	<p>Axes labelled with units and suitable scales (not involving awkward factors, e.g. 3 / over <math>\frac{1}{2}</math> each axis used). (1) All points plotted correctly to within <math>\frac{1}{2}</math> small square division. (2) (–1 for each incorrect plot). All error bars plotted correctly. (1) <b>ecf</b> from (a) Correct maximum gradient and minimum gradient lines consistent with the error bars. (1) See exemplification on pages 38-42 for additional guidance on marking this section.</p>	<p>5</p>																											
<p>(c)</p>	<p>It is a straight-line graph. (1) accept the graph is linear or a comparison with <math>y = mx + c</math> <b>Positive</b> intercept (on the resistance axis). (1) For the 3<sup>rd</sup> mark: <b>Either:</b> Possible to draw a straight line through all the error bars / boxes. (1) allow <b>ecf</b> from graph Accept data points <b>Or</b> Has a positive gradient. (1)</p> <p>N.B. There is no mark for just “yes it is in agreement”. <b>Subtract one mark</b> for contradictory conclusion e.g. “not in agreement” because a straight line with positive intercept through all error bars → 2 marks</p>	<p>3</p>																											

Question		Marking details	Marks Available
(d)	(i)	<p>Large triangles used (should be close to the extremities of the lines) or 2 equivalent suitable points clearly indicated on each line. (1) Both gradients calculated correctly (ignore unit and significant figures) (1 + 1) Allow <b>ecf</b> for incorrect max/min lines. Exemplar values – values must be in agreement with candidate’s graph.</p> $\text{Max gradient} = \frac{6.33 - 4.69}{80.0 - 0.0} = 0.0205 [\Omega^{\circ}\text{C}^{-1}]$ $\text{Min gradient} = \frac{6.17 - 4.86}{80.0 - 0.0} = 0.0164 [\Omega^{\circ}\text{C}^{-1}]$ <p>Marking tips: First check: The value of <math>m_{\text{max}}</math> should be <math>\sim 0.021 [\Omega^{\circ}\text{C}^{-1}]</math> and the value of <math>m_{\text{min}}</math> should be about <math>0.016 [\Omega^{\circ}\text{C}^{-1}]</math>. Candidates who have drawn lines which do not take full advantage of the error bars may get <math>&lt;0.020</math> and <math>&gt;0.017</math> respectively. This is penalised in (c), so apply <b>ecf</b>. Candidates who have drawn ‘tram lines’ will have two nearly identical values of <math>\sim 0.018</math>. Again <b>ecf</b> should be applied.</p>	3
	(ii)	<p>Mean gradient correct (1) [Exemplar value <math>\sim 0.0184[5] [\Omega^{\circ}\text{C}^{-1}]</math> but apply <b>ecf</b> from (b) and (d)(i)]. No unit penalty. Percentage uncertainty correct (1) [Exemplar value <math>\sim 11\%</math>. Allow 1 or 2 sig figs. Apply <b>ecf</b> from (b) and (d)(i)].</p>	2
(e)	(i)	<p>Mean value correct [Exemplar value <math>4.78 [\Omega]</math>]. (1) Percentage uncertainty correct [Exemplar value <math>\sim 2\%</math> - allow 1 or 2 sig figs]. (1) Allow <b>ecf</b> and for 3 sig figs in % uncertainty Intercept = Resistance (of copper) <b>at 0 °C</b>. (1)</p>	3
	(ii)	<p><math>\alpha = \frac{\text{gradient}}{R_0}</math> or <math>\alpha = \frac{\text{gradient}}{\text{intercept}}</math> stated or implied by calc. (1) Correct calculation, i.e. <math>\alpha = \frac{\text{answer to (d)(ii)}}{\text{answer to (e)(i)}} (1)</math></p>	4
	(iii)	<p><math>\alpha = 3.9 \times 10^{-3}</math> [Accept answer in range <math>3.8</math> to <math>4.0 \times 10^{-3}</math>]. (1) Note: This mark is for accuracy. Do not apply <b>ecf</b>. No sig figs penalty. Unit given as <math>^{\circ}\text{C}^{-1}</math> (or <math>\text{K}^{-1}</math>). (1) N.B. If data points selected from the graph or table (1), calculation of <math>\alpha</math> (1), correct unit (1) i.e. maximum of 3 marks awarded.</p> <p>Total % uncertainty = % in (d)(ii) + % in (e)(i). (1) [Exemplar value <math>\sim 13\%</math>. Apply <b>ecf</b>] Absolute uncertainty correct and given to 1 or 2 sig figs. (1) apply <b>ecf</b> [Exemplar value <math>\sim 0.5 \times 10^{-3}</math>] Temperature coefficient of resistance written correctly with its uncertainty, ignore unit, the value given to number of sig figs consistent with uncertainty [e.g. <math>0.0039 \pm 0.0005 ^{\circ}\text{C}^{-1}</math>; <math>(3.9 \pm 0.5) \times 10^{-3} ^{\circ}\text{C}^{-1}</math>]. (1) Award the mark if <math>\alpha</math> and absolute uncertainty calculated correctly but written separately.</p>	3

Resistance /  $\Omega$

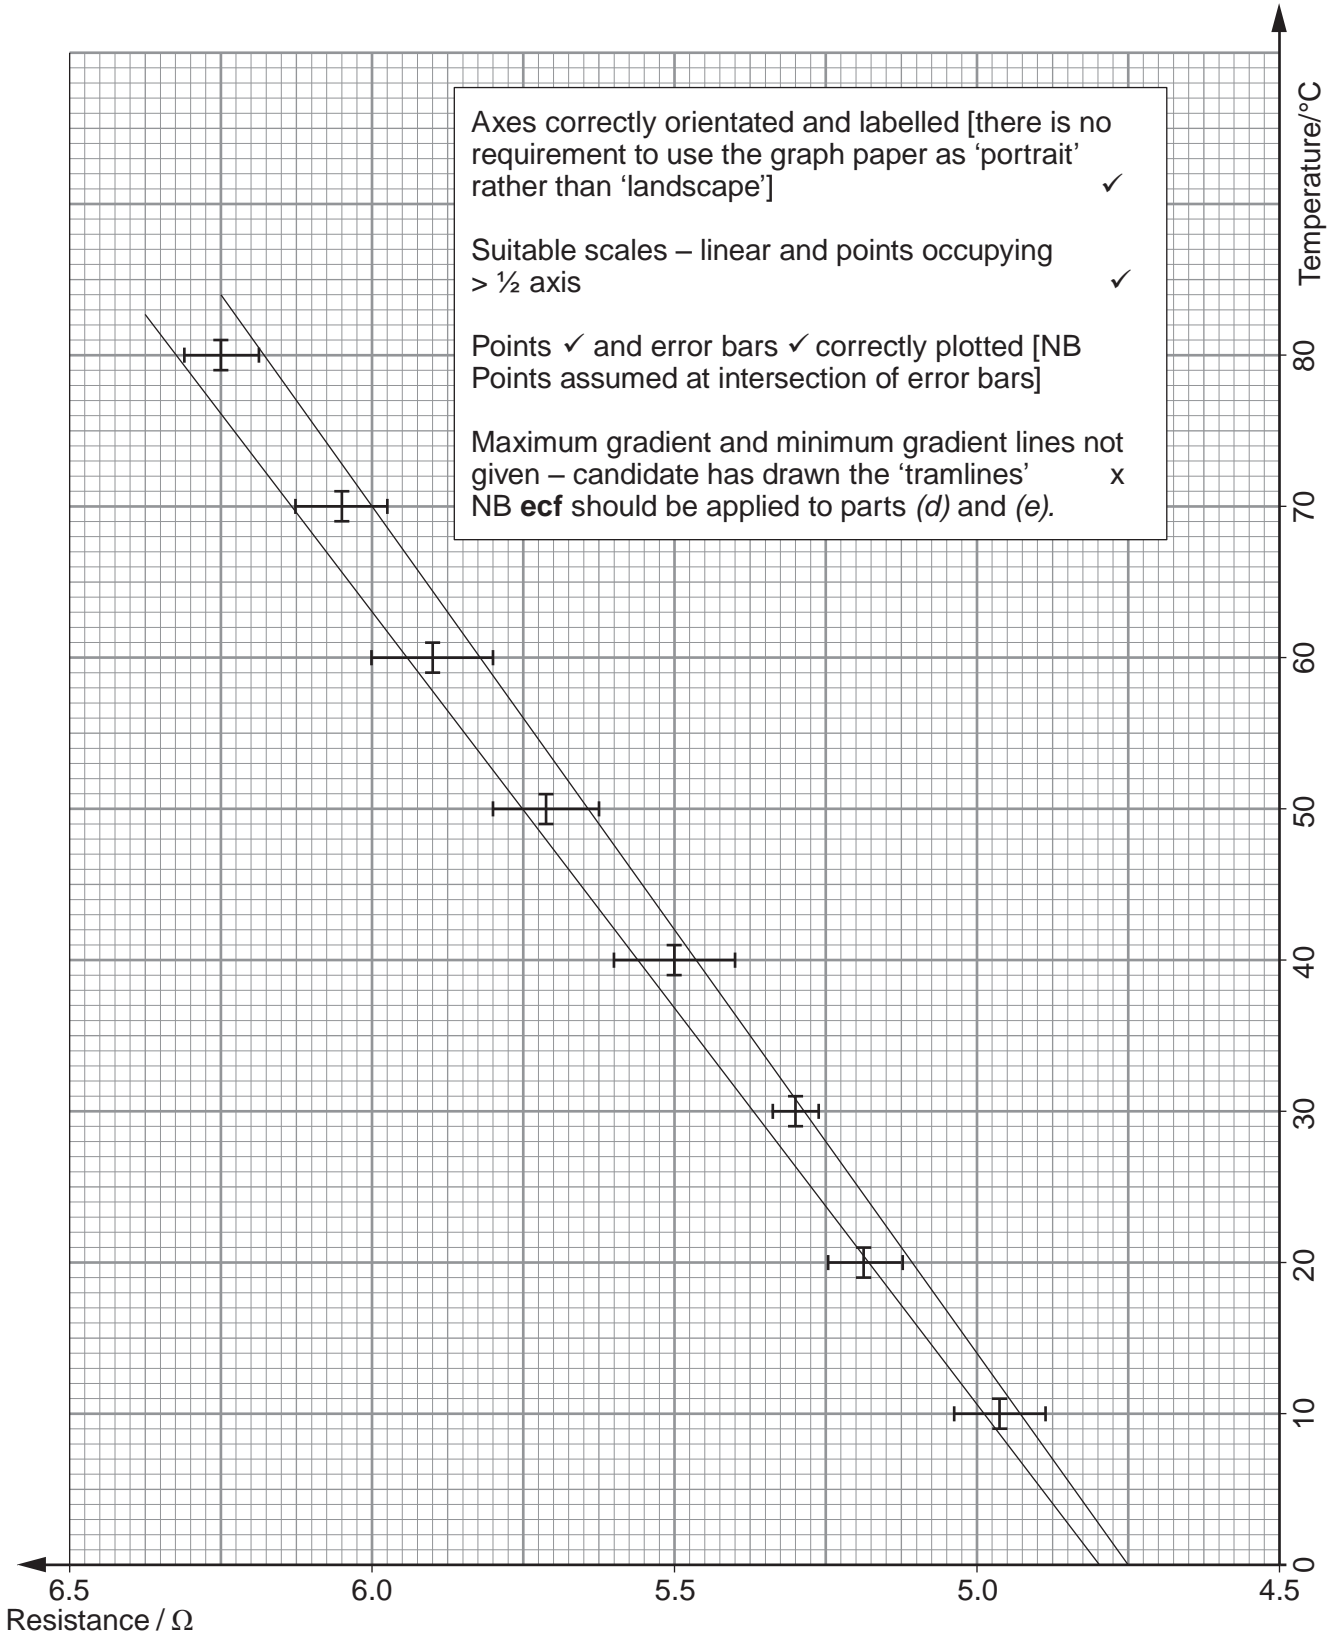

Resistance /  $\Omega$

PH6  
EXPERIMENTAL TASK  
MARK SCHEME – TEST 1

Question	Marking details	Marks Available
(a)	$\ln T = n \ln d + \ln k$ (1) Graph of $\ln T$ (y-axis) against $\ln d$ (x-axis) stated to be plotted or explicit comparison with $y = mx + c$ (1) (accept any logarithm) <i>Remember not to award the marks if the information sheet was issued.</i>	2
(b)	Explain or state a method to ensure the threads are vertical <b>or</b> explanation of thread movement to ensure symmetry implied. (1) accept reference to paired readings or ruler being horizontal Minimum of 5 readings between and including the range 30 cm to 60 cm. (1) Minimum of 5 oscillations timed for each value of $d$ . (1) Repeat readings taken. (1) <b>All of the above points cannot be awarded from the table they must be stated in their plan.</b>	4
(c)	Single, clear, main table with titles and units on each column. (1) Accept if candidates have recorded $d$ in m or cm. N.B. log values should have no unit e.g. $\ln(T/s)$ is acceptable, however $\ln T/s$ and $\ln T/\ln s$ are both not acceptable. Repeat readings given and mean values correct. (1) Period of 1 oscillation calculated correctly and to 3/4 sig figs. <b>ecf</b> (1) The resolution of the ruler given as $\pm 1$ mm and the stopwatch as $\pm 0.01$ s: can be awarded from plan (1) <b>All</b> log values calculated correctly to 2 decimal places (accept 3 dp) <b>and</b> $d$ to nearest mm (1)	5
(d)	Graph of $\ln T$ against $\ln d$ plotted with axis labelled and no units ( <b>ecf</b> units from table). (1) Suitable scale so that data points occupy at least half of each axis. (1) All points plotted correctly to within $\frac{1}{2}$ small square division. (1) Good line of best fit consistent with the data. (1)	4
(e)	Large triangle used (should be close to the extremities of the line of best fit i.e. over half the line used) [or 2 equivalent suitable points clearly indicated on the graph]. (1) Gradient calculated correctly including negative sign. (1) Gradient = $n$ clearly stated. (1)	3
(f)	(i) Yes - <b>with 2 × (1) of the following points:</b> (N.B. gradient in (e) must be between 0.70 to 1.30) <ul style="list-style-type: none"> <li>• <b>Gradient</b> is negative; (1)</li> <li>• <b>Gradient or <math>n</math></b> is approximately / equal to 1; (1)</li> <li>• Inversely proportional or <math>T</math> is proportional to <math>d^{-1}</math>. (1)</li> </ul> <b>Alternative:</b> Yes because $n / \text{gradient} = -1$ . (2) N.B. no <b>ecf</b> allowed from the graph or part (e) i.e. if graph is wrong and value of $n$ is wrong they lose these 2 marks. (Yes on its own = 0 marks.) <b>Award a maximum of 2 marks only.</b>	2
	(ii) Rearrangement $b = \frac{T^2 d^2}{4\pi^2 l}$ (1)  Correct calculation of $b$ using points taken from their table. (1) Units $\text{cm s}^2$ (accept $\text{m s}^2$ if consistent with calculation). (1)	3
	(iii) Increase / become longer. (1) by $\sqrt{2}$ . (1)	2
