

GCE

Physics A

Unit **G482**: Electrons, Waves and Photons

Advanced Subsidiary GCE

Mark Scheme for June 2016

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

© OCR 2016

Annotations

Annotation	Meaning
	Benefit of doubt given
	Contradiction
	Incorrect response
	Error carried forward
	Follow through
	Not answered question
	Benefit of doubt not given
	Power of 10 error
	Omission mark
	Rounding error ONLY APPLIED ONCE IN THE PAPER; also use as Repeated error
	Error in number of significant figures ONLY APPLIED ONCE IN THE PAPER
	Correct response
	Arithmetic error
	Wrong physics or equation
/	alternative and acceptable answers for the same marking point
(1)	Separates marking points
reject	Answers which are not worthy of credit

Annotation	Meaning
not	Answers which are not worthy of credit
IGNORE	Statements which are irrelevant
ALLOW	Answers that can be accepted
()	Words which are not essential to gain credit
—	Underlined words must be present in answer to score a mark
ecf	Error carried forward
AW	Alternative wording
ORA	Or reverse argument

Subject-specific Marking Instructions**CATEGORISATION OF MARKS**

The marking scheme categorises marks on the MABC scheme

- B** marks: These are awarded as independent marks, which do not depend on other marks. For a **B**-mark to be scored, the point to which it refers must be seen specifically in the candidate's answer.
- M** marks: These are method marks upon which **A**-marks (accuracy marks) later depend. For an **M**-mark to be scored, the point to which it refers must be seen in the candidate's answer. If a candidate fails to score a particular **M**-mark, then none of the dependent **A**-marks can be scored.
- C** marks: These are compensatory method marks which can be scored even if the points to which they refer are not written down by the candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a **C**-mark and the candidate does not write down the actual equation but does correct working which shows that the candidate knew the equation, then the **C**-mark is given.
- A** marks: These are accuracy or answer marks, which either depend on an **M**-mark, or allow a **C**-mark to be scored.

Note about significant figures:

If the data given in a question is to 2 SF, then allow answers to 2 or more SF.

If the answer is given to fewer than 2 SF, then penalise once only in the entire paper. **N.B.** Also penalise RE only once per paper.

Any exception to this rule will be mentioned in the Guidance.

A tick should be placed in the body of the script at the point where each mark is awarded.

Question		Answer	M	Guidance	
1	a	resistivity = resistance x (cross-sectional) area / length	B1	accept equation with <i>resistance</i> as subject allow over for divide by; do NOT allow algebraic formula followed by a word definition of each symbol	
	b	i	A = $\pi d^2/4 = 3.14 \times 10^{-6} \text{ m}^2$ $\rho = RA/l = 8.0 \times 3.14 \times 10^{-6}/0.15$ $\rho = 1.7 \times 10^{-4}$ unit $\Omega \text{ m}$	C1 C1 A1 B1	apply POT error as many times as occurs correct substitution with ecf for A accept 1.68×10^{-4} accept $\Omega \text{ mm}$ or $\text{m}\Omega \text{ m}$, etc.
		ii 1	current below X in 'lead' equals current in 4 Ω same V across 'lead' below X and 4 Ω or they are in parallel (so) X is the mid point of the 'lead'/ 4 Ω is half of 8 Ω	B1 B1 B1	allow reverse argument starting from 4 Ω as resistance of half of 'lead' allow references to A_1 & A_2 possibly to indicate branches of circuit rather than meters
		ii 2	sum of R's in parallel = 2 Ω total R = 6 Ω so I = 0.50 A	C1 A1	incorrect working with correct answer cannot score second mark allow 0.5 A;
	c	select I = nAev = 0.40 A $v = 0.40/3.6 \times 10^{26} \times 3.14 \times 10^{-6} \times 1.6 \times 10^{-19}$ = $2.2 \times 10^{-3} \text{ (m s}^{-1}\text{)}$	C1 C1 A1	correct substitutions into formula with ecf for A answer to be given to 2 or more SF	
	d	i	reference to differences in <u>number density</u> of (free) electrons/charge carriers conductors have n a (few) powers of 10 <u>greater</u> than semiconductors/AW	B1 B1	allow n, number per m^3 or unit volume allow <u>much</u> greater than
		ii	<i>conductor</i> : R or ρ rises because of (increase in) electron ion collisions/ v falls <i>semiconductor</i> : R or ρ falls because of (large) increase in n/free electrons	B1 B1	allow R or resistivity rises for conductors and falls for semiconductors for 1 mark allow current decreases for same p.d. /AW allow current increases for same p.d. /AW
Total question 1			17		

Question			Answer	M	Guidance
2	a	i	straight line through origin passing through (2, 30)	B1 B1	allow 2.0 ± 0.05 , i.e. half a square
		ii	V is <u>proportional</u> to I for the resistor R but the LED the characteristic/line is a curve/not a straight line	B1 B1	accept statement of Ohm's law allow $V \propto I$ NOT gradient changes nor gradient not constant
	b	i	From Fig. 2.1, V <u>across R</u> at 30 mA = 2.0 V or $0.03 \times 67 = 2.0$ V V <u>across LED</u> = $5.0 - 2.0 = 3.0$ V I in LED at 3.0 V is 30 mA	B1 B1 B1	allow 1 SF answers in b(i) and (ii) at 30 mA R of LED = 100Ω total R = 167Ω I in LED = $5.0/167 = 30$ mA or in reverse
		ii 1	0.030 (C)	A1	allow 30 mC or 3.0×10^{-2} C
		ii 2	QV or VI = 3.0×0.03 or $I^2R = 0.03^2 \times 100$ energy = 0.090 (J)	C1 A1	possible ecf from (ii)1 allow 90 mJ or 9.0×10^{-2} J allow 1 mark for 0.15 (J), i.e. taking $V = 5$ V
		ii 3	$P = I^2R = 0.03^2 \times 67$ = 0.060 (J)	C1 A1	possible ecf from b(i) for R value allow $P = VI = 2.0 \times 0.03 = 0.060$ J or $P = V^2/R = 2.0^2/67 = 0.0597$ J
		iii	current required is 0.63 A so nearest larger value is best 1.0 A	M1 A1	
	c		suitable example, e.g. torch bulb, traffic light, car rear lamp, etc. (replaced by cluster of LEDs) advantage, e.g. draws a lower current/ more efficient (at converting electrical energy into light)/if one LED fails others are still lit/greater lifetime/more robust	B1 B1	accept TV screens etc. allow size e.g. back lighting in mobile NOT cost
			Total question 2	16	

Question		Answer	M	Guidance
3	a	energy	A1	
	b	i	B1 B1	award 1 mark for only one of the two bold phrases; 2 marks for both present allow 1 mark for answer which uses $V = E - Ir$ with explanation or the p.d. across (the terminals of) the supply when it is delivering a current (to an external circuit)
		ii	B1	NOT the energy lost as heat inside the supply allow (causes) 'lost volts' per unit current (in the supply)
	c	i	B1 B1 B1 B1 B1	Do not allow any analysis with E assumed to be 6 V allow 2 pairs of values of V and I to be substituted into equation to find r (non-graph method max 2/5) allow <u>find</u> or similar word ignore problem of minus sign, i.e. assume value only
		ii	B1	allow e.g. to stop the current becoming too large/AW
	d	i	A1	arrow need not be on circuit wire
		ii	C1 A1	allow 0.7 A
		iii 1	A1	ecf(d)(ii) i.e. answer = 2 x ans(d)(ii) NOT ecf when $I = 1.05 \text{ A}/3.45 \text{ A}$ giving 2.1 V/6.9 V
		iii 2	C1 A1	ecf(d)(ii)
Total question 3			16	

Question		Answer	M	Guidance		
4	a	All of the <i>rays/wavefronts/waves</i> are added together (at each point on the screen) when the path difference is an exact number of wavelengths the <i>rays/waves</i> interfere constructively giving maximum amplitude/intensity (at all other angles) when the path difference between rays is not an exact number of wavelengths the <i>rays/waves interfere destructively/cancel out</i> giving a <i>dark background/little to no intensity</i>	B1 B1 B1 B1 B1	max 4 marks to include the second marking point NOT <i>superpose</i> or <i>interfere</i> for <i>added</i> as in stem of Q allow $n\lambda$ QWC mark allow bright <i>line/light</i> NOT bright fringes nor maxima NOT when the path difference is $(2n + 1)\lambda/2$ there is destructive interference/AW allow suitable annotation of diagram to score marks		
		b	i 1	two lines between 5 and 15 degrees (judge by eye)	B1	allow with label C missing; actual value is 12.5°
		i 2	select $n\lambda = d \sin \theta$ $579 \times 10^{-9} = d \sin 20 = 0.342 d$ $d = 1.7 \times 10^{-6} \text{ (m)}$	C1 C1 A1	allow $n = 1$ in initial equation allow 1.69×10^{-6}	
		ii	E	B1		
		iii	D,E	B1		
		iv	$E = 3.64 \times 10^{-19} \text{ J}$ select $E = hc/\lambda$, $\lambda = 6.63 \times 10^{-34} \times 3.0 \times 10^8 / 3.64 \times 10^{-19}$ $\lambda = 5.46 \times 10^{-7} \text{ m}$ D	C1 B1 A1 A0	accept 546 nm; N.B. a correct unit must be present	
		v	lines appear at the same <i>positions/frequencies</i> in the spectrum emission: <i>bright/coloured</i> lines (on dark background) absorption: <i>dark/black</i> lines (on <i>bright background/continuous spectrum</i>)	B1 B1	allow comparison of backgrounds only or just a full description of absorption spectrum	
		vi	$E = (3.1 + 4.7) \times 10^{-19} \text{ J} = 7.8 \times 10^{-19} \text{ J}$ select $E = hc/\lambda$, $\lambda = 6.63 \times 10^{-34} \times 3.0 \times 10^8 / 7.8 \times 10^{-19}$ $\lambda = 2.55 \times 10^{-7} \text{ m}$	B1 B1 A1	$E = 6.63 \times 10^{-34} \times 3.0 \times 10^8 / 2.54 \times 10^{-7}$ giving $E = 7.8(3) \times 10^{-19} \text{ J}$ ($f = 1.18 \times 10^{15} \text{ Hz}$) which equals $(3.1 + 4.7) \times 10^{-19} \text{ J}$	
Total question 4			18			

Question			Answer	M	Guidance
5	a	i	<p>λ minimum distance between <i>neighbouring/adjacent</i> identical points on the wave</p> <p>f number of (complete) <i>oscillations/cycles/vibrations</i> (at a point) per unit time or produced by the wave source per unit time</p> <p>T time for one complete oscillation or time for one complete oscillation <u>at a point</u> on the wave</p>	B1 B1 B1	<p>N.B. one of the two emboldened words must be present ;allow e.g distance from one peak to the next peak of the wave</p> <p>allow number of <u>wavelengths</u> passing a point per unit time; allow per second NOT amount</p> <p>NOT in a second nor $f = 1/T$</p> <p>allow time for one <u>wavelength</u> to pass a (given) point</p> <p>NOT time for one oscillation to pass nor $T = 1/f$</p> <p>N.B. if $f=1/T$ or $T = 1/f$ is included in an otherwise correct definition ignore, do not CON</p>
		ii	<p>speed = (distance of) one wavelength travelled per period where period equals $1/\text{frequency}$</p> <p>so $v = \lambda/(1/f) = f \lambda$</p> <p>or in 1 second f wavelengths λ are produced distance travelled by first wavelength in one second is $f \lambda = v$</p>	M1 M1 A1	<p>allow $v = \lambda/T$</p> <p>but $T = 1/f$</p> <p>so $v = \lambda/(1/f) = f \lambda$</p> <p>NOT derivation in terms of units</p>
	b	i 1	$\frac{3}{4} \lambda$ with node at closed end and antinode at open end	B1	allow poorly proportioned sketches which reach both ends
		i 2	all nodes and antinodes drawn in bi1 correctly labelled N and A only two N and two A present	B1 B1	positions of labels must be accurate to the eye allow max of one mark for only 3 out of the 4 labelled
		ii	<p>$\lambda/2 = 33 \text{ cm}$</p> <p>$v = f\lambda = 512 \times 0.66$</p> <p>$v = 338 \text{ or } 340 \text{ (m s}^{-1}\text{)}$</p>	C1 C1 A1	<p>or $\lambda/4 = 16.5 \text{ cm}$</p> <p>N.B. an incorrect value of $\lambda/4$ or $\lambda/2$ scores 0/3</p>
	c	i	the pipe is one wavelength long with both ends antinodes so sketch must have 3 antinodes and 2 nodes <u>with reasonably correct proportions</u>	B1	
		ii1	256 (Hz)	B1	
		ii2	$\lambda/2$ with antinodes at both ends	B1	
		iii	<p>v is the same in the pipe at all f/length is fixed = $\lambda_0/2 = \lambda_1$</p> <p>so as $f_1 \lambda_1 = f_0 \lambda_0$ then $f_1 = 2f_0$</p> <p>or harmonics must have antinodes at both ends of the pipe so <u>next</u> possible pattern is <i>one wavelength/has 3A and 2N</i></p>	B1 B1	allow 1 mark for: as $f_1 = 2f_0$ then f_1 is the second harmonic or halving the wavelength doubles the frequency
Total question 5				17	

Question			Answer	M	Guidance
6	a	i	λ is the (de Broglie) wavelength <u>associated with a particle</u> h is (a constant known as) the Planck constant mv is the momentum/mass x speed of <u>the particle</u>	B1 B1 B1	allow object/electron for particle accept velocity for speed accept m and v separately but the particle must appear with one of the quantities to score the mark
		ii	electrons passing through a (thin) sheet of graphite are diffracted producing <i>rings/pattern</i> (on a fluorescent screen)	B1 A1	any suitable situation NOT Au or Al, etc. what is observed + interpretation 1 mark. Do not award the A mark alone unless a plausible situation has been suggested. <i>Young slits</i> type experiments etc score 0/2
		iii 1	$eV = \frac{1}{2} mv^2$ $2eV/m = v^2$ so $v = \sqrt{(2 \times 1.6 \times 10^{-19} \times 5.0 \times 10^4 / 9.1 \times 10^{-31})}$ so $v = 1.3 \times 10^8 \text{ (m s}^{-1}\text{)}$	C1 C1 B1 A0	allow $eV = 8.0 \times 10^{-15} \text{ J}$ for 1 mark allow $\sqrt{(2 \times 8.0 \times 10^{-15} / 9.1 \times 10^{-31})}$ or evidence of correct calculation, e.g. $v = 1.325 \times 10^8$
		iii 2	$\lambda = h/mv = 6.63 \times 10^{-34} / 1.3 \times 10^8 \times 9.1 \times 10^{-31}$ $\lambda = 5.6 \times 10^{-12} \text{ (m)}$	C1 A1	allow 5.5×10^{-12} if 1.325×10^8 is used
		iii 3	λ of visible light $5.6 \times 10^{-7} \text{ m}$ so power of 10 = 5 or -5	B1 B1	ecf aiii2 ; accept 4 to $7 \times 10^{-7} \text{ m}$ NOT 10^{-7} NOT 10^5 on the answer line
	b		The photoelectric effect Individual photons are absorbed by individual electrons in the metal surface, i.e. one to one interaction. Only photons with energies above the work function energy will cause photoelectron emission/idea of threshold frequency Hence u-v photons or blue photons will cause photoemission but red photons will not. Number of electrons emitted depends on light intensity A wave model does not explain instantaneous emission of electrons. A wave model does not explain a threshold frequency/wavelength for emission to occur	B1 B1 B1 B1 B1 B1	QWC mark allow exp't description: uv light shone on a zinc plate connected to a gle max 3 from 6 marking points allow wave model does not explain no emission however bright the light if energy of photon below work function
