General Certificate of Secondary Education June 2013

Methods in Mathematics (Pilot) 9365
Unit 1 Foundation Tier 93651F

## Final

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: aqa.org.uk

## Copyright

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

## Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

| M | Method marks are awarded for a correct method which could lead to a <br> correct answer. |
| :--- | :--- |
| M dep | A method mark dependent on a previous method mark being awarded. |
| A | Accuracy marks are awarded when following on from a correct method. <br> It is not necessary to always see the method. This can be implied. |
| B | Marks awarded independent of method. |
| B dep | A mark that can only be awarded if a previous independent mark has <br> been awarded. |
| Q | Follow through marks. Marks awarded for correct working following a <br> mistake in an earlier step. |
| St | Special case. Marks awarded for a common misinterpretation which has <br> some mathematical worth. |
| or equivalent. Accept answers that are equivalent. |  |

## M1 Foundation Tier

| Q Answer | Mark | Comments |
| :---: | :--- | :---: | :---: |
| $\mathbf{1}(\mathbf{a})$ 4 rectangles shaded B1  <br> $\mathbf{1 ( b )}$ 30 B1  <br> $\mathbf{1 ( c )}$ $(0) .8(0)$ B1  |  |  |

| 2(a) | Circles 'Certain' | B1 | Any indication |
| :---: | :--- | :---: | :--- |
| 2(b) | All even numbers, three of which are <br> multiples of 10 | B2 | B1 all even numbers <br> B1 three multiples of 10 and one odd <br> number or blank <br> Numbers may be repeated |

| 3 | 2 | 4 | 11 | 8 | B3 | B2 for two or three sides adding to 25 using the numbers $1,4,5,9,10,11$ <br> B1 for one side adds to 25 using the numbers 1, 4, 5, 9, 10, 11 <br> All numbers on sides qualifying for marks must be different |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
