Version 1.0 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

## Glossary for Mark Schemes

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.
\(\left.\left.$$
\begin{array}{ll}\text { M } & \begin{array}{l}\text { Method marks are awarded for a correct method which could lead } \\
\text { to a correct answer. }\end{array} \\
\text { M dep } & \begin{array}{l}\text { A method mark dependent on a previous method mark being } \\
\text { awarded. }\end{array} \\
\text { A } & \begin{array}{l}\text { Accuracy marks are awarded when following on from a correct } \\
\text { method. It is not necessary to always see the method. This can be } \\
\text { implied. }\end{array} \\
\text { B } & \begin{array}{l}\text { Marks awarded independent of method. }\end{array} \\
\text { B dep mark that can only be awarded if a previous independent mark } \\
\text { has been awarded. }\end{array}
$$ \quad $$
\begin{array}{l}\text { Marks awarded for quality of written communication. }\end{array}
