GCE Examinations

Mechanics Module M2

Advanced Subsidiary / Advanced Level

Paper C

Time: 1 hour 30 minutes

Instructions and Information

Candidates may use any calculator except those with a facility for symbolic algebra and/or calculus.

Full marks may be obtained for answers to ALL questions.

Mathematical and statistical formulae and tables are available.

This paper has 7 questions.

When a numerical value of g is required, use $g = 9.8 \text{ m s}^{-2}$.

Advice to Candidates

You must show sufficient working to make your methods clear to an examiner. Answers without working will gain no credit.

1. A particle *P* of mass 2 kg is subjected to a force **F** such that its displacement, **r** metres, from a fixed origin, *O*, at time *t* seconds is given by

$$\mathbf{r} = (3t^2 - 4)\mathbf{i} + (3 - 4t^2)\mathbf{j}$$
.

(a) Show that the acceleration of P is constant.

(4 marks)

(b) Find the magnitude of **F**.

(3 marks)

2. A pump raises water from a well 12 metres below the ground and ejects the water through a pipe of diameter 10 cm at a speed of 6 m s⁻¹.

Given that the mass of 1 m³ of water is 1000 kg,

- (a) find, in terms of π , the mass of water discharged by the pipe every second, (4 marks)
- (b) find in kJ, correct to 3 significant figures, the total mechanical energy gained by the water per second.

(4 marks)

- 3. A particle moves in a straight horizontal line such that its velocity, $v \text{ m s}^{-1}$, at time t seconds is given by $v = 2t^2 9t + 4$. Initially, the particle has displacement 9 m from a fixed point O on the line.
 - (a) Find the initial velocity of the particle.

(1 mark)

(b) Show that the particle is at rest when t = 4 and find the other value of t when it is at rest.

(3 marks)

(c) Find the displacement of the particle from O when t = 6.

(5 marks)

4.

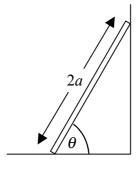

Fig. 1

Figure 1 shows a uniform ladder of mass m and length 2a resting against a rough vertical wall with its lower end on rough horizontal ground. The coefficient of friction between the ladder and the wall is $\frac{1}{2}$ and the coefficient of friction between the ladder and the ground is $\frac{1}{3}$.

Given that the ladder is in limiting equilibrium when it is inclined at an angle θ to the horizontal, show that $\tan \theta = \frac{5}{4}$.

(9 marks)

5. A firework company is testing its new brand of firework, the *Sputnik Special*. One of the company's employees lights a *Sputnik Special* on a large area of horizontal ground and it takes off at a small angle to the vertical. After a flight lasting 8 seconds it lands at a distance of 24 metres from the point where it was launched.

The employee models the firework as a particle and ignores air resistance and any loss of mass which the *Sputnik Special* experiences.

Using this model, find for this flight of the Sputnik Special,

- (a) the horizontal and vertical components of the initial velocity, (5 marks)
- (b) the initial speed, correct to 3 significant figures, (2 marks)
- (c) the maximum height attained. (3 marks)
- (d) Comment on the suitability of the modelling assumptions made by the employee.

(3 marks)

Turn over

6. Three uniform spheres A, B and C of equal radius have masses 3m, 2m and 2m respectively. Initially, the spheres are at rest on a smooth horizontal table with their centres in a straight line and with B between A and C. Sphere A is projected directly towards B with speed u.

Given that the coefficient of restitution between A and B is $\frac{2}{3}$,

(a) show that the speeds of A and B after the collision are $\frac{1}{3}u$ and u respectively.

(6 marks)

The coefficient of restitution between B and C is e. Given that A and B collide again,

(b) show that $e > \frac{1}{3}$.

(8 marks)

7.

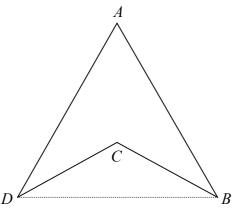

Fig. 2

Figure 2 shows a uniform lamina *ABCD* formed by removing an isosceles triangle *BCD* from an equilateral triangle *ABD* of side 2*d*. The point *C* is the centroid of triangle *ABD*.

(a) Find the area of triangle BCD in terms of d.

(3 marks)

(b) Show that the distance of the centre of mass of the lamina from BD is $\frac{4}{9}\sqrt{3} d$.

(8 marks)

The lamina is freely suspended from the point B and hangs at rest.

(c) Find in degrees, correct to 1 decimal place, the acute angle that the side AB makes with the vertical.

(4 marks)
